

Made with GAMMA

Learning has never been easier to access. Knowing what to learn — and what to do next — is still hard.

Too much choice

Thousands of courses make it hard to know where to start.

No context

Platforms don't adapt to WHY someone wants to learn.

Learning stops at content

People consume but struggle to practice, create, or apply.

Made with GAMMA

People don't just want to learn a skill. They want to learn it *for a reason.*

Curiosity

"I just want to understand photography."

Personal interest

"I want to improve my photography."

Creator goal

"I want to create better content."

Career

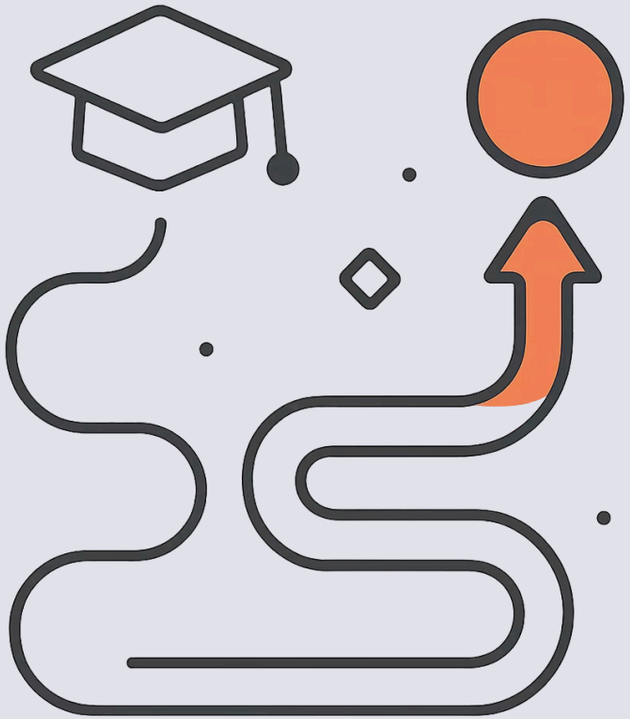

"I want to become a photographer."

Income

"I want to get freelance work."

Same skill. Different intent.

Different learning journey.

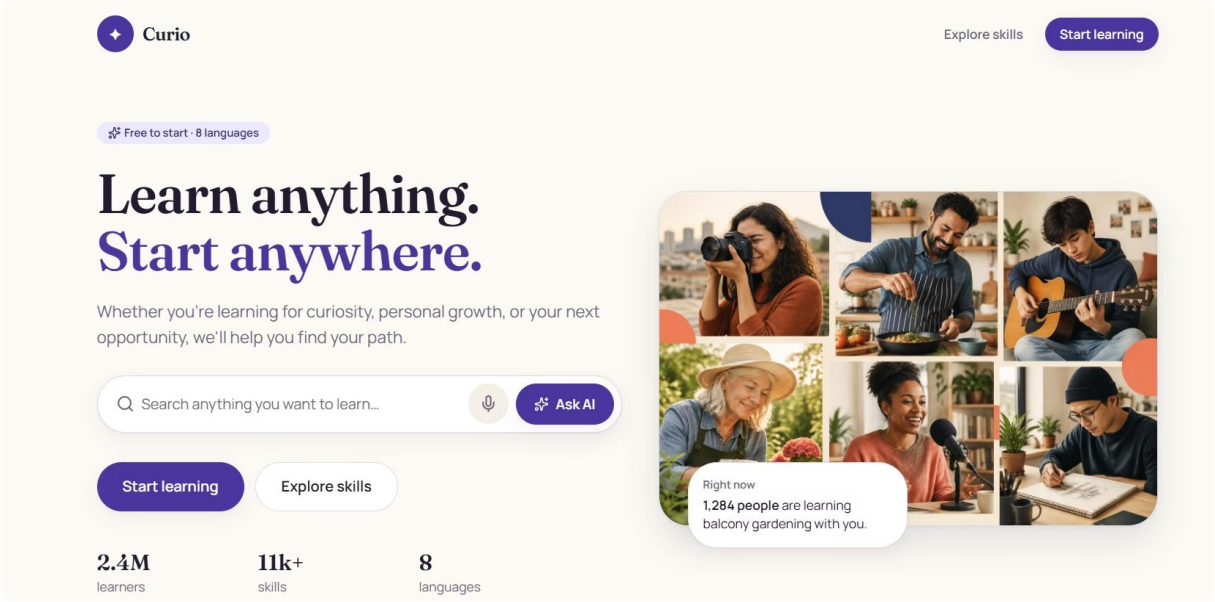

Made with GAMMA

So I built Curio.

A place where curiosity turns into capability.

1	2	3	4	5	6
Discover	Personalize	Learn	Practice	Create	Grow

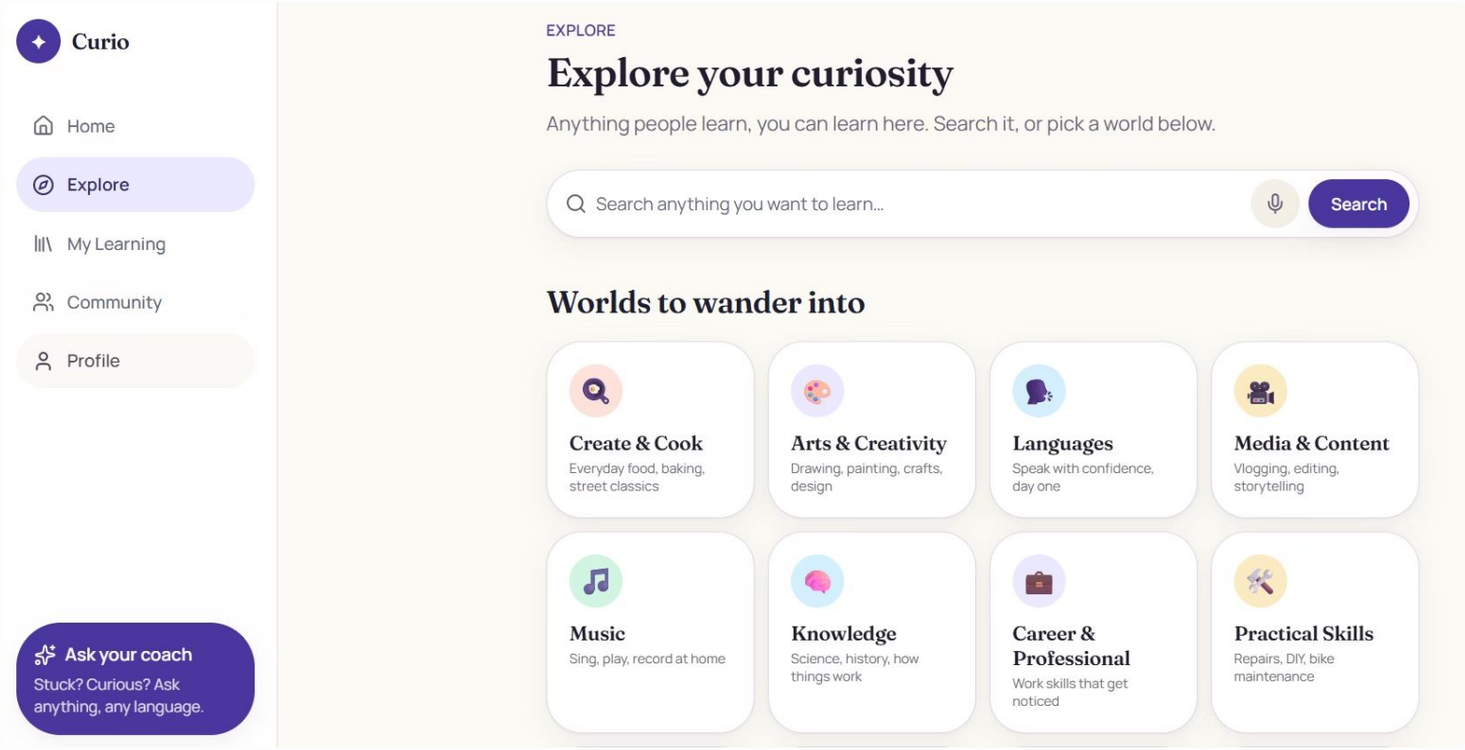

Made with GAMMA

The first question isn't "What do you want to learn?" It's "Why?"

Intent drives everything. Curio starts by understanding the **why** behind the skill.

WHY ↓ determines ↓ WHAT + HOW + NEXT

I'm curious	Personal interest	Personal goal	Career / income

Made with GAMMA

Learning adapts to the learner.

Every path is shaped by the learner's intent, pace, and progress — not a one-size-fits-all curriculum.

[INSERT ACTUAL CURIO LEARNING EXPERIENCE SCREENSHOT]

Bite-sized lessons

Content broken into focused, digestible steps.

Personalized learning path

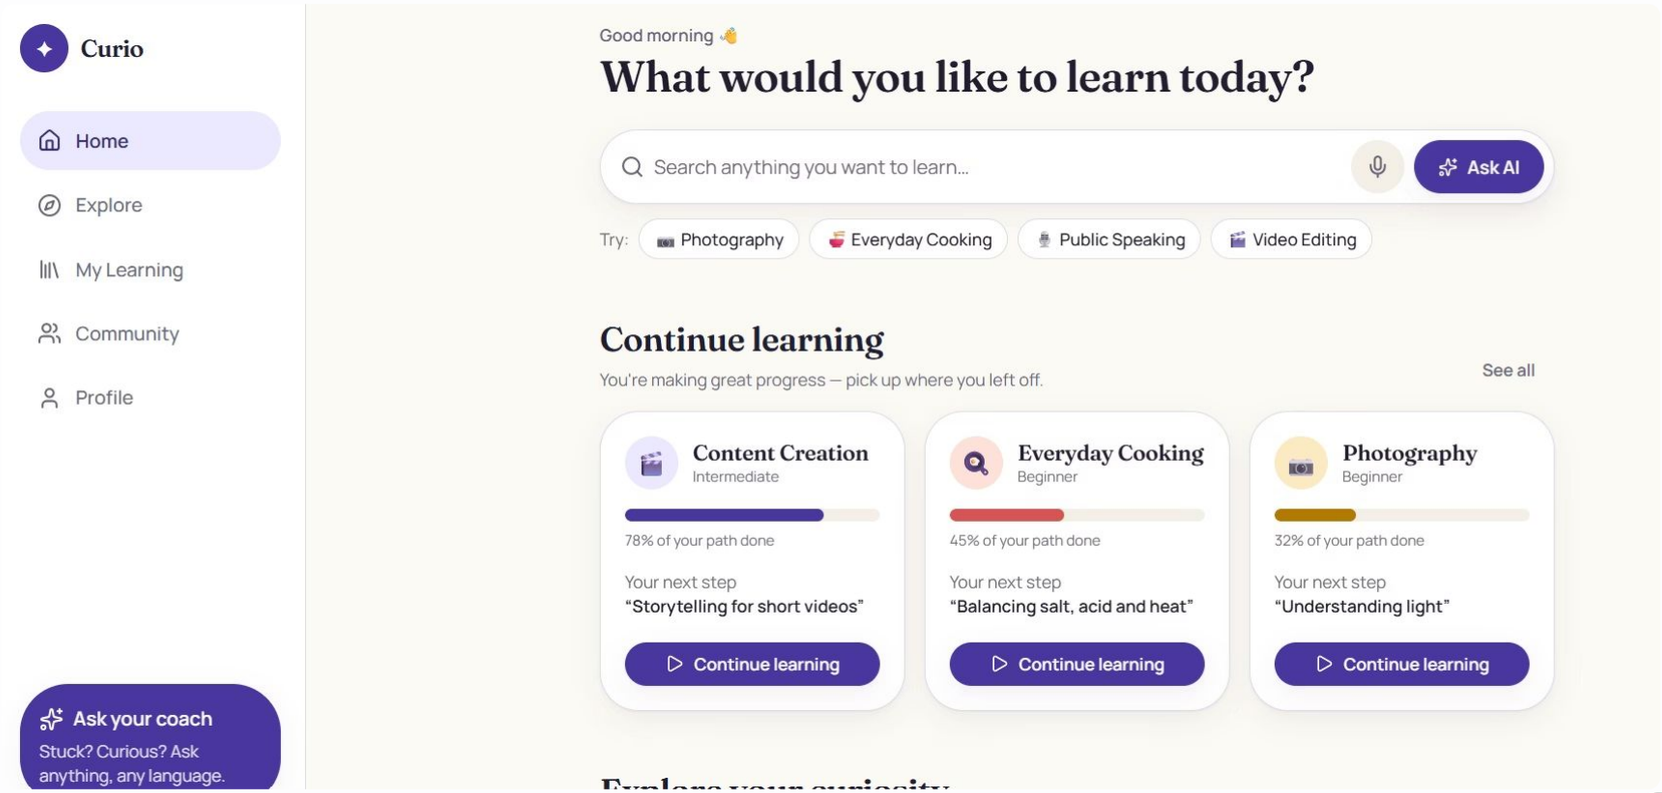

Sequenced to your goal, not a generic syllabus.

AI-powered practice & feedback

Active learning, not passive consumption.

Next steps guidance

Always know what to do after every lesson.

Made with GAMMA

From watching to doing to creating.

Peer Communities

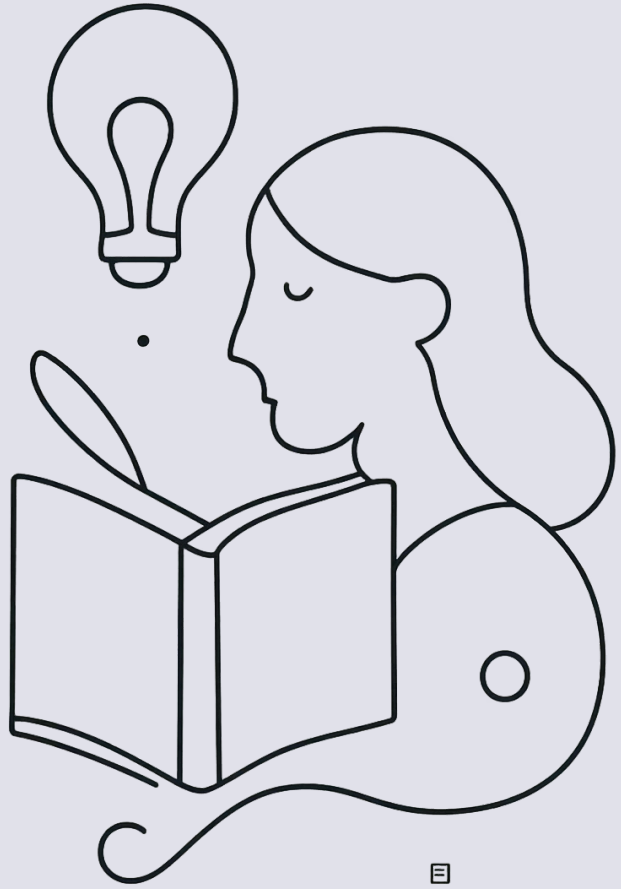

Skill-specific groups for support and accountability.

Portfolio Building

Showcase real work for career-oriented learners.

Opportunities

Freelance work, jobs, and mentorship — when you're ready.

Made with GAMMA

From idea to working prototype.

01

Problem definition

Identifying the gap between curiosity and capability.

02

User & problem exploration

Interviews, surveys, and competitive research.

03

Product concept

Core mechanics and experience principles.

04

PRD & user flows

Requirements and end-to-end journeys documented.

05

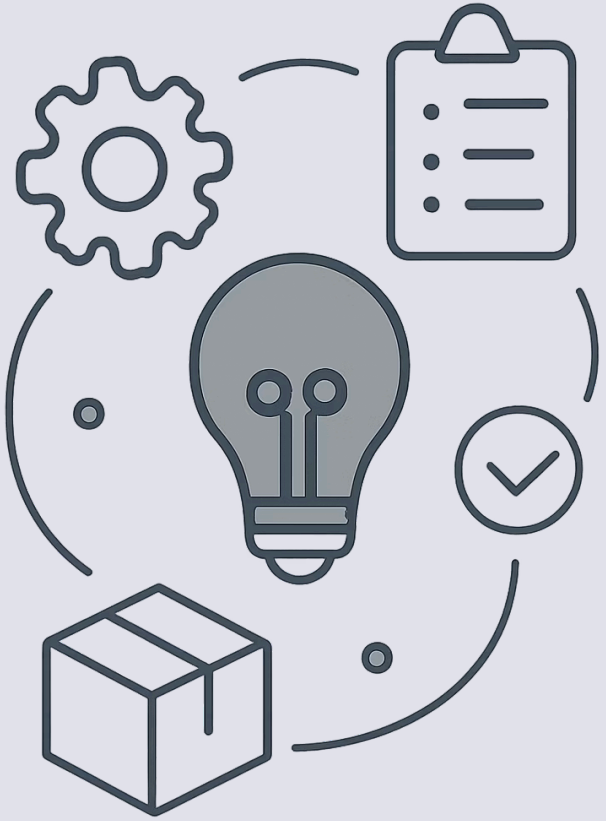

Wireframes → Prototype

Lo-fi to hi-fi, iterating toward a testable product.

06

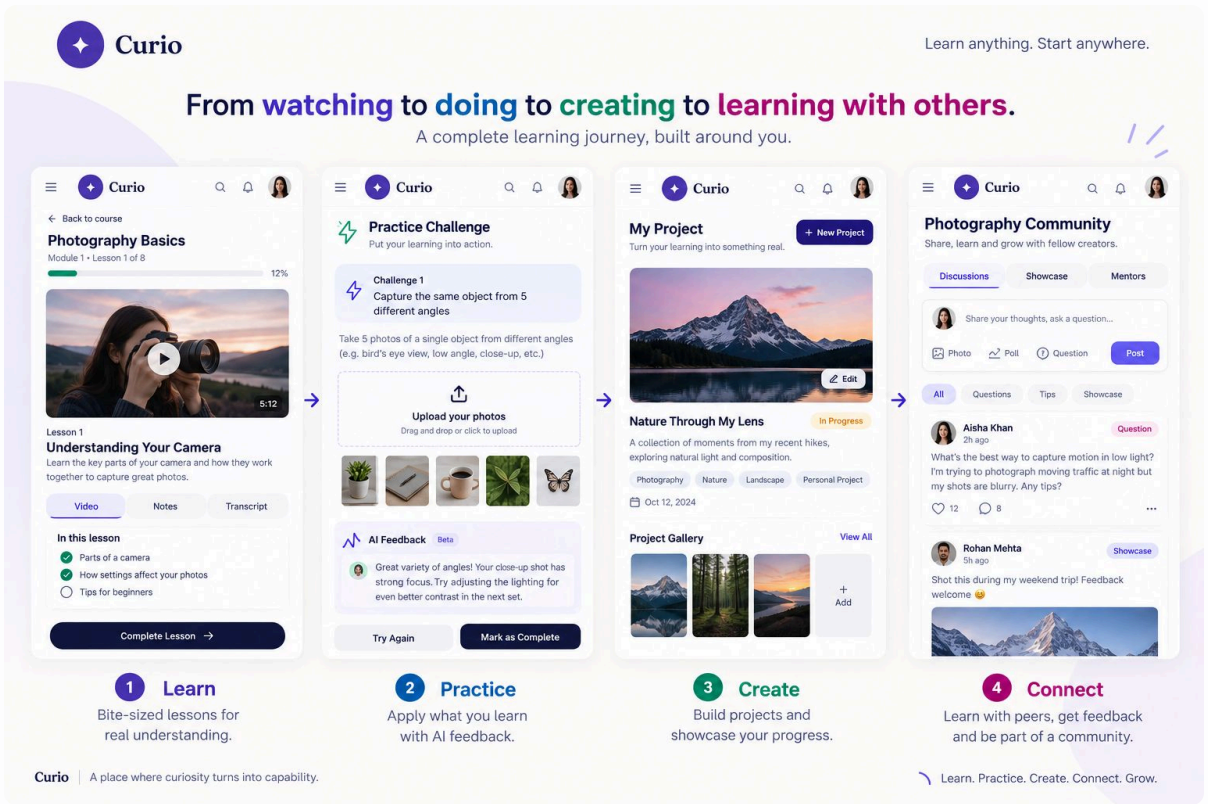

User testing & iteration

Real feedback driving real changes.

Made with GAMMA

Early learner feedback shaped the experience.

EARLY LEARNER FEEDBACK

> "Choosing why I want to learn makes the experience feel more relevant."

Users tested

5

Learner perspectives considered

Key finding

Intent matters

Learners found the "Why are you learning?" step useful because the same skill can have different goals.

What changed

Learn → Practice → Create

Strengthened the journey beyond lessons so learners can apply what they learn and build something.

Build → Learn → Iterate

Made with GAMMA

Learn anything. Start anywhere.

Because your curiosity shouldn't be limited by your background, language, or starting point.
