Glassdoor Interview Brief

A last-minute interview assistant that turns Glassdoor's interview data into a personalized preparation brief.

Objective

Business:

- Increase engagement with Glassdoor's Interviews section.
- Increase the number of users returning to Glassdoor before an interview.
- Help users discover more value from existing interview data.
- Increase Premium engagement through a faster and more useful interview research

experience.

Users:

- Help candidates understand the interview process quickly.
- Bring the most relevant and recent Glassdoor information into one place.
- Reduce the time spent reading multiple interview experiences.
- Clearly show when information is limited instead of making unsupported predictions.

How do we measure success?

Goal: Help candidates understand what the interview process may look like using relevant information already available on Glassdoor.

Success Metrics

Key Metric: Interview Brief Engagement Rate: Percentage of users who open an Interview Brief and interact with at least one section.

Secondary Metrics

- Interview Brief adoption
- Interview reports opened
- Questions opened
- Company profile visits
- Interview content saved
- Preparation checklist completion

Guardrails:

- Citation/source accuracy
- Percentage of claims supported by Glassdoor data
- Response time
- User-reported usefulness

Who are the Users?

Primary Persona: Last-Minute Job Seeker

- Age: 22–35
- Role: Students and working professionals

- Context: Has an interview scheduled within the next 24–48 hours.
- Environment: Uses Glassdoor to research the company, salary, reviews and interview experience.

Problems We Are Solving

Core Need

Glassdoor already has useful interview information, but candidates have to find and connect the information themselves.

Glassdoor's interview pages can contain interview counts, interview difficulty, how candidates got interviews, interview experiences, questions and other details. The information varies by company and role.

Problems

- Users have to open multiple interview reports to understand common patterns.
- Recent information can be mixed with older experiences.
- Some roles have many interview questions while others have very few.
- Candidates don't know which information is most relevant to their role.
- Users may leave Glassdoor to research the company separately.
- There is no simple one-page summary of the available interview evidence.

Jobs To Be Done (JTBD)

Functional Job

When I have an upcoming interview, I want to quickly understand the company's interview process so I know what to expect.

Emotional Job

I want to feel prepared instead of spending hours wondering what information I should focus on.

Social Job

I want to walk into the interview feeling confident and informed.

How do we know these problems exist?

User Survey (10 Responses)

Key Findings

- 80% of candidates read multiple interview experiences before an interview.
- 70% search for company-specific interview information.

- 60% use multiple sources to prepare for an interview.
- 50% find it difficult to identify which interview information is recent and relevant.
- 70% would prefer a short summary of interview experiences instead of reading them individually.

Behavioural Signals

- Candidates open multiple interview reports for the same company.
- Users compare interview difficulty and process information across reports.
- Users spend time looking for questions relevant to their specific role.
- Candidates often switch between company, interview and job pages.
- Users leave Glassdoor to research additional company information elsewhere.

Solution

I evaluated multiple solutions using the RICE framework (Reach × Impact × Confidence ÷ Effort).

Solution	Reach (1-3)	Impact (1-3)	Confidence (1-3)	Effort (1-3)	RICE	Rationale
Interview Brief	3	2	3	1	18	Brings existing interview information together and highlights the most useful patterns.
Better Interview Filters	3	3	3	1	13.5	Makes search easier but users still need to interpret the information themselves.
AI Mock Interview	2	2	3	1	12	Useful, but it moves away from Glassdoor's strongest advantage: real candidate experiences.

Selected Solution: Interview Brief

An AI-generated summary of existing Glassdoor interview information for a selected company and role.

RAG Architecture

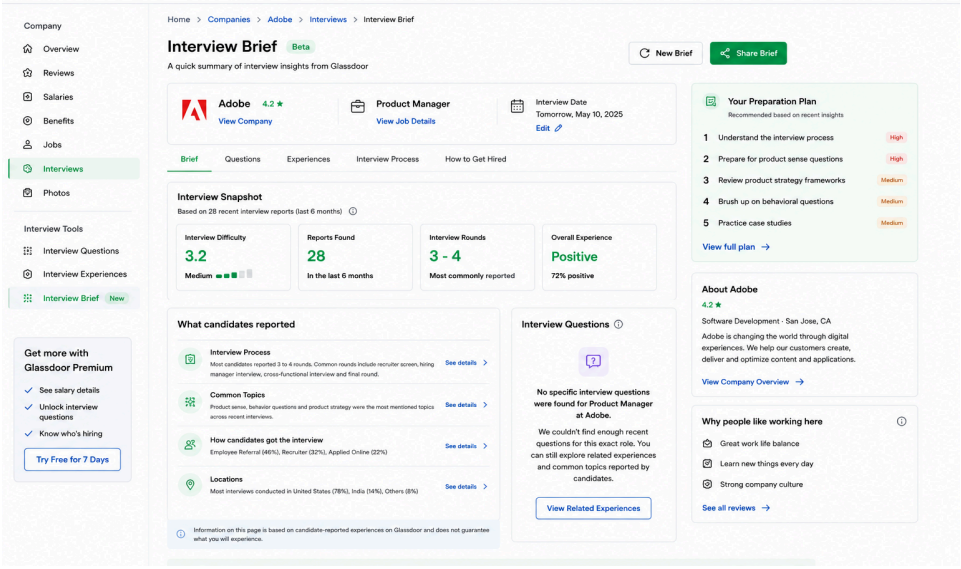

Knowledge Base

The RAG system can retrieve from:

- Interview experiences
- Interview questions
- Interview dates
- Interview locations
- Interview difficulty
- Candidate outcomes
- How candidates got the interview
- Company information
- Job information

Wireframe

User Stories

Candidate

- As a candidate, I want a summary of recent interview experiences so that I don't have to read dozens of reports.
- As a candidate, I want to know how difficult the interview is so that I can plan my preparation.
- As a candidate, I want to see questions when they are available so that I can practice relevant topics.
- As a candidate, I want to know when information is missing so that I don't mistake limited data for a prediction.
- As a candidate, I want to open the original interview reports so that I can verify the AI summary.

User Acceptance Criteria

- Users can select a company and role.
- Users can generate an Interview Brief.
- Brief prioritizes recent information.
- Brief prioritizes the selected role.
- Every factual summary is linked to supporting Glassdoor data.
- Questions are shown only when relevant questions exist.
- Missing information is clearly communicated.

- Users can open the original interview report.
- AI does not claim to know the exact questions the user will receive.

Edge Cases

Scenario	Expected Behaviour
Very few interview reports	Clearly show that evidence is limited.
No reports for the exact role	Show closely related roles and clearly label them.
Conflicting experiences	Show both patterns rather than choosing one without evidence.
No company data	Ask users to select another company or broaden the search.
