Step 1

User Interviews + Surveys

Based on insights from **user interviews and survey responses** across polls and groups, several clear themes emerged.

Users consistently appreciated **the ease of joining meetings**, **a simple and clutter-free interface**, and **seamless integration with Google tools**. These aspects were seen as core strengths that make Google Meet reliable for everyday use.

S. No	Theme	What users asked for	User problem observed	Impact
1	Post-meeting continuity	• Saved chat history • Meeting recordings with captions • Integrated note-taking	Users struggle to revisit discussions, track decisions, and retain context after meetings	Forces reliance on external tools or leads to loss of important information
2	Reliability	More stable audio and video experience	Audio and video issues are frequent and frustrating, especially in work-critical meetings	Disrupts productivity and reduces trust in the platform
3	Engagement & customization	• Live polls and quick reactions • More customization options • UI improvements	Users feel limited in keeping meetings interactive and tailored to their needs	Meetings become less engaging, particularly during longer or collaborative sessions

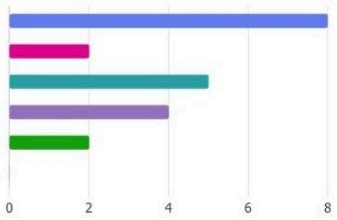

1.In which situations do you primarily use Google Meet?

Work meetings (internal team)	5
Client / external meetings	3
Online classes / learning	4
Interviews / hiring	3
Personal / casual calls	5

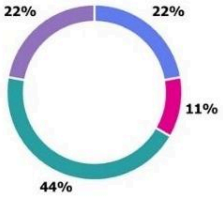

2.Which aspect of Google Meet do you appreciate the most? *(select all that apply)*

Ease of joining meetings	8
Audio & video quality	2
Simple, clutter-free interface	5
Integration with Google tools (Gmail, Calendar, Docs)	4
Works well on low internet	2
Something else (please specify)	0

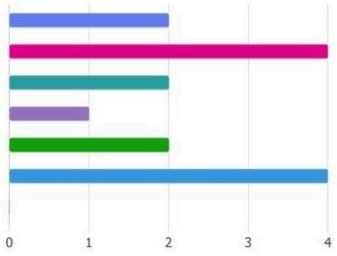

3.At which stage do you face the most friction? *(select all that apply)*

Before the meeting (joining, setup, links, reminders)	2
During the meeting (audio/video, chat, screen share, captions)	1
After the meeting (notes, recordings, follow-ups)	4
I don't usually face issues	2

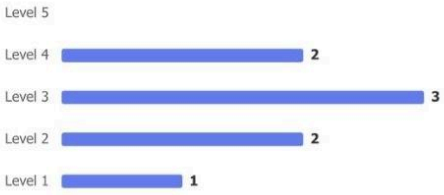

4.Which of these have you faced at least once? *(select all that apply)*

Trouble joining the meeting	2
Audio/video issues	4
Chat messages getting lost	2
Difficulty sharing screen	1
Captions or recordings missing/inaccurate	2
Losing track of decisions or action items after the meeting	4
None of the above	0

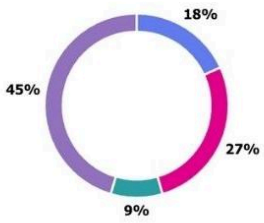

5.When this issue happens, how much does it impact you?

6.When Google Meet doesn't support what you need, what do you usually do? *(select all that apply)*

Take notes separately (Docs / Notion / paper)	2
Screenshot or record externally	3
Follow up on chat or email	1
Switch to another meeting tool	5
Skip capturing it altogether	0

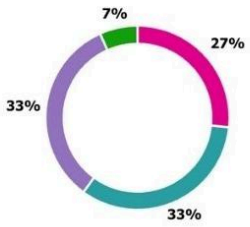

7.Please upload any screenshots or files that help illustrate the challenges above.

0
Responses

0 responses submitted

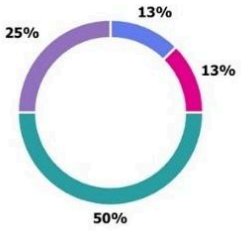

8.If few things could be improved in Google Meet, what should it be? *(select all that apply)*

Joining & setup experience	0
In-meeting communication (chat, reactions, captions)	4
Audio/video reliability	5
Post-meeting summary (recordings, notes, follow-ups)	5
Better integrations with other tools	1

9.How often do you need to refer back to a past meeting?

Almost every time	1
Of ten	1
Sometimes	4
Rarely	2

10.How likely are you to recommend to a friend or colleague if it can make improvements in the future?

Promoters	4
Passives	2
Detractors	2

Step 2

SWOT Analysis

Strengths

From my research, I observed that users value Google Meet for its simplicity and ease of joining meetings followed by appreciating the simple clutter-free UI. These strengths make it reliable for everyday use and lower the learning curve, especially for quick or recurring meetings.

Here are some samples of user feedback in Google Play store.

★★★★★ 2 December 2025

Works better on a tablet - really good option to have when other messaging services don't work in certain countries. So long as you have a good internet connection, there are no issues with the video call. When I try to use on my phone, not sure if it's the other user's error when joining the call via a link... But with a tablet, no need for a link, call goes straight through.

★★★★★ 21 May 2025

I love using Google Meet. it's reliable for both voice calls and video calls. I use it for meetings, classes, coffee chats, etc. The app would be so much better if the host of a call could get a list of all people who joined the call at some point or the other (not just the people in the call at a particular time). It would be great for marking attendance at meetings and classes.

Weakness

A major weakness I identified is the lack of persistent meeting artifacts. Users struggle to revisit discussions, chats, or decisions after meetings, often relying on external tools or losing information entirely. Additionally, reliability issues around audio and video negatively impact trust, especially in work-critical meetings.

22 users asked for chat history, notes, or recordings with captions.

Here are some samples of user feedback in Google Play store.

Ive been a user from the beginning(Hangouts days), and Duo was great. It was bare bones, basic. I could get on with my young son and draw, do math, I could leave messages. Now all of the things that made the app good are no longer available. They've gone corporate, trying to appeal to businesses now, using this platform that was held up by regular people. Ill be looking for another platform.

It was better as Duo and Meet separately. I loved having 2 separate apps. One for personal use and one for professional use. I used Duo with family and my child was able to communicate by messaging me and other family members. Now that the messaging abilities have been removed, my child can't communicate with us without calling. I'm not a fan of the merge & I hope it gets reversed. It's just a glitchy professional video meeting app now.

Opportunities

My findings suggest a strong opportunity for Google Meet to evolve from a “meeting tool” into a “meeting memory system.” Enhancing post-meeting continuity and adding lightweight engagement features could significantly improve user satisfaction without compromising simplicity.

- **15+ users** requested saved chat, notes, and captioned recordings.
- **2 users** asked for interactive features like live polls and reactions.
- **3 users** mentioned customization, UI changes, or Zoom-like features.

Here are some samples of user feedback in Google Play store.

it's still ok for like tutoring I guess, but why would you guys remove the video messaging feature? I loved using it with my mom, since she works pretty far from home and it's how we can see each other without doing a whole call. now you guys got rid of it for no reason. 3 stars

it's okay, miss the message feature that allowed you to send a video, voice or text messages when the other person doesn't pick up. without that feature makes the only choice to call when I am trying to get ahold of my 8 year old on her tablet

★★★☆☆ 27 November 2025

"I had complained about the call experience on Meet, and I feel that the call quality needs improvement. Whether it's video calls, audio calls, or audio messages, the experience falls short. I use the app extensively, but the quality isn't up to par. Improving the call quality would greatly enhance the user experience."

Threats

I noticed that users often compare Google Meet with competitors, especially Zoom. When reliability issues or feature limitations surface, users are more likely to switch tools rather than adapt their workflows, making retention a key risk.

- **Users** explicitly asked for Zoom-like features.
- Users feel limited as meeting duration and collaboration needs increase.
- Audio/video issues push users to consider switching tools.

What's one thing about Google Meet that you feel should be scaled up and added or improved?
Add features of recording captions and save the live chat.
I have faced audio and video issues multiple times and that is frustrating.
Google Meet should improve interactive features like live polls and quick reactions to keep meetings more engaging.
-
Notes taking
Chat history
More customised options similar to zoom
UI CAN BE CHANGED
Cool Features Like Zoom

Step 3

Goal setting - Linking User Pain to Business Impact

S. No	User Problem	Leads to User behaviour	Business Impact / Metric affected
1	Chat history is not saved after meetings	Users take screenshots, copy messages manually, or move discussions to other tools	• Low engagement • Low retention
2	Recordings and captions are missing or insufficient	Users re-attend meetings, ask teammates for context, or avoid using Meet for important discussions	• Low retention • Low trust • Low usage
3	No integrated note-taking	Users take notes in Docs/Notion separately or skip documenting outcomes	• Low engagement • Low retention
4	Audio/video reliability issues	Users get frustrated, switch tools mid-call, or avoid Meet for critical meetings	• Low activation • Low retention • High churn risk
5	Lack of interactive features (polls, reactions)	Users multitask or disengage during meetings	• Low engagement • Low retention

Chosen primary metric: **Retention** because

- Users already like joining Google Meet.
- Losing meeting context pushes users to external tools & competitors.
- Improving post-meeting continuity increases - repeat usage, trust.

Goal statement: *Improve retention by 15% over the next 6 months for working professionals who use Google Meet for internal and client meetings.*

Step 4

Personas - Bringing Users to Life

Persona 1: The Execution-Driven Professional

Identity	• Name: Rakshith • Role: IT professional

	• Age: 26 • Location: Bengaluru • Tagline: “If it’s discussed, it should be captured.”
Goals	• Capture **decisions, action items, and context** from meetings. • Avoid repeating discussions or chasing teammates for clarity.
Behaviours	• Uses Google Meet multiple times a week for work. • Often joins via Calendar or Gmail. • Takes notes in Notion alongside meetings. • Refers back to past meetings for follow-ups occasionally.
Frustrations	• Chat disappears after the meeting. • No easy way to revisit what was discussed. • I have to rely on other tools for notes and follow-ups.
Quote	“The meeting ends, and so does all the context.”

Persona 2: The Educator

Identity	• Name: Alisha • Role: Educator • Age: 21 • Location: Mysuru • Tagline: “If people aren’t engaged, the meeting fails.”
Goals	• Keep participants **engaged and attentive.** • Make meetings feel interactive, not passive.
Behaviours	• Hosts or facilitates meetings. • Uses chat and reactions when available. • Notices drop-offs in attention during longer calls.

Frustrations	• Meetings feel one-sided. • Limited ways to engage participants.
Quote	“People are on the call, but not really in the meeting.”

Step 5

Problem Prioritization - Choosing P0

Problems identified

1. Chat history is lost after the meeting.
2. No integrated note-taking or meeting summary.
3. Recordings and captions are missing or unreliable.
4. Audio/video reliability issues.
5. Lack of interactive features (polls, reactions).

Score with PIF (Population × Intensity × Frequency)

Problem	Population	Intensity	Frequency	PIF score
Chat history is lost after the meeting.	4	4	4	12
No integrated note-taking or meeting summary	3	4	3	10
Recordings and captions are missing or unreliable	3	4	3	10
Audio/video reliability issues	3	5	2	10
Lack of interactive features (polls, reactions)	2	3	2	7

Strategic filters

It links to the chosen business goal ➜ Retention because chat history / notes / recording has a strong link.

Product strength

It aligns with product strength because Google meet has -

- ★ Simplicity
- ★ Fast joining
- ★ Google ecosystem integration
- ★ Chat persistence + Notes fit naturally with Google Docs, Drive & Calendar.

Scope

- It is solvable with reasonable scope because chat persistence is incremental.
- Post-meeting artifacts can be phased.

P0 problem

Lack of post-meeting continuity, specifically loss of chat history.

Because

- Highest PIF score.
- Stronger retention link.
- Supported by user evidence.

Problem Statement

Working professionals using Google Meet are unable to revisit chat discussions after meetings, causing loss of context, missed decisions, and reliance on external tools. This breaks continuity across meetings and reduces long-term reliance on Google Meet for work-critical conversations.
