Problem Hypothesis 7

Step 1

Getting started with the Product Analysis - Flows & Frictions

S. No	Flows / Touchpoints	What works well	Confusion / Friction
1	Signup → login	• Easy social login • Quick account creation	• Forced login to read full answers • Aggressive app download prompts • Permission / notification overload
2	Home feed → Content discovery	• Diverse topics • Personalised feed concept	• Irrelevant content in feed • Duplicate questions • Hard to identify best answer • Weak categorization
3	Search → Finding answers	• Large archive of historical Q&A • Appears in Google search results	• Too many similar threads • Overwhelming long answers • No structured summary • Hard to judge credibility
4	Reading answers → Evaluating quality	• Multiple perspectives • Upvote system	• Spam / promotional answers • Opinion vs fact not differentiated • No evidence labeling • Quality perceived to decline
5	Posting Question → Receiving Responses	• Simple question posting flow • Broad reach to community	• Low-quality or irrelevant answers • Few responses to niche questions • No clarity on how question is routed
6	Writing Answer → Publishing	• Easy formatting • Large audience visibility	• Fear of content deletion • Accounts banned without clarity • Perceived inconsistent moderation

			• Auto-save / crash issues
7	Moderation → Reporting Content	• Reporting feature exists	• Reporting feels ineffective • No explanation for bans • Bot moderation perceived as harsh • Appeal process unclear
8	Notifications → Re-engagement	• Keeps users updated • Community interaction reminders	• Notifications feel intrusive • Feels overly personalized / tracking concern • Irrelevant email pushes
9	App Performance → Technical Experience	• Stable basic browsing for many users	• Freezing / crashing reported • Losing typed content • Errors while sharing • Messaging feature missing / hidden
10	Exit → Post-Usage Reflection	• Informative knowledge base • Community value	• Perception that quality has declined since 2017–2020 • Users migrating to Reddit / AI tools • Trust erosion

Below are the few images for the respective workflow.

Step 2

Company context (Mission, Revenue & Differentiators)

S. No	Field	Context
1	Mission	To organize and share the world's knowledge by enabling people to ask questions and receive high-quality answers from diverse perspectives.
2	Revenue streams	1. Advertising (targeted display ads within feed & answers) 2. Quora+ subscription model (premium content access)

		3. Creator monetization share model 4. Data-driven ad targeting leveraging user interests
3	User value	• Access to diverse human perspectives • Large archive of historical Q&A • Ability to ask niche & personal questions • Personalized topic-based feed • Free access to broad knowledge base
4	Business value	• High engagement via infinite-scroll feed model • Ad monetization through topic-based targeting • User-generated content reduces content creation cost • Subscription upsell via Quora+ • SEO dominance via Google search indexing
5	Key Differentiators	1. Reddit: *Community-driven users* Quora offers a structured Q&A format with cleaner UI. It is more topic-oriented rather than community oriented. 2. Stack Overflow: *For power users like Developers or technical professionals.* Quora offers a broad domain coverage with more of a conversational tone and is accessible to the general public. 3. Medium: *Hub for writers and thought leaders.* Quora is interactive and multi-perspective.

Step 3

Feature Reverse-Engineering

S. No	Feature	Problem it solves	How it works	Why it works
1	Upvote System	*"How do I know which answer is good?"*	Users upvote answers; higher votes rank answers upward.	• For Users: Quick social proof indicator. • For Business: Community-driven moderation reduces cost.future conversion opportunities.

2	Ask Question Flow	*"I can't find answers to my specific situation."*	Users can post questions publicly; routed to topic followers & suggested answerers.	• For Users: Niche & personal problem solving. • For Business: Continuous content generation at scale.
3	Multi-perspective Answer Model	*"I want different viewpoints, not just one answer."*	Multiple users respond with varied experiences & expertise.	• For Users: Rich diversity of thought. • For Business: More engagement & return visits.
4	Quora+ Subscription	*"I want premium or expert-level content."*	Paid subscription unlocks select creator answers & exclusive content.	• For Users: Access to curated, high-quality responses. • For Business: Diversified revenue beyond ads.
5	Reporting & Moderation System	*"There's inappropriate or harmful content."*	Users report content; automated + human moderation reviews.	• For Users: Safer environment (in theory). • For Business: Compliance & brand protection.
6	Topic Tagging & Routing	*"My question should reach the right audience."*	NLP-based tagging assigns questions to relevant topics & followers.	• For Users: Better chance of quality answers. • For Business: Efficient content distribution.

Step 4

User segmentation

S. No	Primary segment	Sub-segments	Key needs / Use cases	User Problems
1	Knowledge Seekers	Students	• Quick conceptual clarity	• Too many opinion-based answers

			• Homework help • Exam preparation	• Hard to verify correctness • Overwhelming long threads
		Professionals	• Career advice • Industry insights • Decision support	• Low-quality or generic responses • Difficulty identifying expert answers • Spam content
		Casual learners	• Curiosity-driven browsing • Personal growth topics	• Irrelevant feed recommendations • Duplicate questions
2	Contributors (Answer Writers)	Subject-matter experts	• Share expertise • Build authority • Reach large audience	• Answers deleted without clarity • Moderation inconsistency • Lack of credibility recognition
		Hobbyists / Enthusiasts	• Share personal experiences • Engage in discussions	• Content buried under spam • Limited visibility for quality answers
3	Community-Oriented Users	Anonymous users	• Ask sensitive / personal questions • Seek unbiased advice	• Fear of judgment • Inconsistent moderation • Hate / biased responses
		Debate participants	• Exchange viewpoints • Engage in discussions	• Toxic conversations • Polarized opinions • Lack of structured debate format
4	Passive Consumers	Search-driven users (Google traffic)	• Quick answer without logging in • Instant clarity	• Forced login / app download prompts • Hard to identify best answer quickly

Step 5

Problem Hypothesis

Priority	Problem Hypothesis	Why I picked it	Gut confidence
1	**Users struggle to identify trustworthy, high-quality answers.** ➔ Users encounter spam, opinion-heavy, or unverified responses, making it difficult to distinguish credible information, leading to declining trust and platform leakage.	• Most repeated theme in survey (evidence-backed answers requested). • Frequent Play Store complaints about spam & misinformation. • Direct impact on retention & competitive migration (Reddit/AI tools).	HIGH
2	**Moderation feels inconsistent and non-transparent.** ➔ Users report account bans, content deletion, and ineffective reporting without clear explanation, reducing contributor trust and participation.	• Strong emotional language in 1–2 star reviews. • Contributors leaving platform. • Impacts supply side (quality answer writers).	HIGH
3	**Content discovery is overwhelming and poorly structured.** ➔ Duplicate threads, weak categorization, and long unstructured discussions make it difficult to quickly find the best answer.	• Survey: Hard to find the best answer. • Play Store: Wrong tagging & routing issues. • Impacts new user conversion from Google traffic.	HIGH-MEDIUM
