

# Product Requirement Document [PRD]

| | |
|---|---|
| Title | Google Meet – Persistent Chat History for Post-Meeting Continuity |
| Date & Version | 18th February, 2026. V1 |
| Product - Point of Contact (POC) | Manish Verma |
| Design POC | |
| Tech POC | |
| Marketing POC | |

## Objective

1. **Business**:
    a. Improve **30-day retention by 15% within 6 months** for working professionals using Google Meet for internal and client meetings.
    b. Increase post-meeting artifact engagement (chat history access rate) to strengthen repeat usage.
    c. Reduce dependency on external tools for meeting documentation, positioning Google Meet as a comprehensive collaboration solution.
    d. Strengthen competitive differentiation in post-meeting continuity against alternative meeting platforms.
2. **Users**:
    a. Enable users to **revisit in-meeting chat discussions after the meeting ends**.
    b. Reduce loss of context, missed decisions, and repeated conversations.
    c. Provide a simple, reliable way to retrieve shared links, action items, and discussion points.
    d. Maintain Google Meet's core strengths of simplicity and fast access while adding continuity.

## How do we measure success?

1. **Goal**: Increase retention among working professionals by improving post-meeting continuity
2. **Success Metrics:**

a. Key Metric: 30-Day Meeting Retention Rate (Working Professionals)
b. Secondary Metrics
    i. Chat History Access Rate
    ii. Post-Meeting Artifact Usage Rate
3. **Guardrails:**
    a. Meeting Join Time
    b. Meeting Completion Rate
    c. Privacy Complaint Volume

## Who are the Users?

1. **Persona:**
    a. **Primary Persona:** Execution-Driven Professional
        i. Age: 25–40
        ii. Role: Product Manager, Consultant, Operations Lead, Team Lead
        iii. Context: Uses Google Meet for internal syncs and client meetings multiple times a week
        iv. Environment: Google Workspace ecosystem (Calendar, Docs, Gmail)
2. **Problems we are solving**
    a. **Core Need**
        i. Users need a way to **retain and revisit meeting conversations** after the meeting ends.
    b. **Problems**
        i. Chat messages disappear after the meeting
        ii. Users lose context of shared links and decisions
        iii. No lightweight way to revisit meeting discussions
        iv. Users rely on screenshots or external tools
        v. Important action items get lost
    c. **Jobs To Be Done (JTBD)**
        i. **Functional Job**
            1. When I finish a meeting, I want to quickly revisit what was discussed so that I don't miss decisions or action items.
        ii. **Emotional Job**
            1. I want to feel confident that nothing important was lost.
        iii. **Social Job**
            1. I want to appear organised and reliable when following up.
3. **How do we know these problems exist?**
    a. **User Interviews (2 conducted)**
        i. Both participants reported difficulty tracking chat discussions post-meeting.
        ii. Users mentioned relying on external tools for documentation.
    b. **Survey (≈20 responses)**
        i. Multiple respondents explicitly requested

1. Saved chat history
2. Meeting recordings with captions
3. Integrated note-taking

ii. Post-meeting continuity emerged as the strongest recurring theme.

iii. Users reported frequently needing to refer back to meetings.

c. **Behavioural Signals**

i. Users switch to other tools for documentation.

ii. Users compare Google Meet to competitors offering stronger continuity features.

## Solution

1. **Brief of the solution:** To address the loss of post-meeting context, we will introduce **Persistent Chat History** in Google Meet.

This feature will automatically save in-meeting chat messages and make them accessible after the meeting ends via:

- A "Chat History" tab inside the Google Calendar event
- A post-meeting summary screen with a "View Chat History" option
- Searchable, timestamped, participant-attributed chat logs
- Optional host-level control and admin-configurable retention policies

This solution directly solves the P0 problem by ensuring users can revisit discussions, retrieve shared links, and track decisions without relying on external tools.

The design will prioritise:

- Minimal UI disruption
- Seamless integration with Google Workspace
- Strong privacy controls and consent visibility

2. **Alternatives Considered (with Prioritisation Metrics):** I evaluated multiple solutions using the **RICE framework** (Reach × Impact × Confidence ÷ Effort).

| Solution | Reach (1-3) | Impact (1-3) | Confidence (1-3) | Effort (1-3) | RICE score | Rationale |
|---|---|---|---|---|---|---|
| Persistent Chat History | 3 | 3 | 3 | 2 | 13.5 | Affects most working professionals. Directly solves the P0 problem. Strong research backing. Medium engineering effort. |
| Chat-to-Doc Export (1-click) | 3 | 2 | 3 | 1 | 18 | Leverages Google ecosystem. High reach. Lower effort. Strong alignment with integration strength. |
| Smart Action Item Extraction | 2 | 3 | 2 | 3 | 4 | Valuable but assumption- |

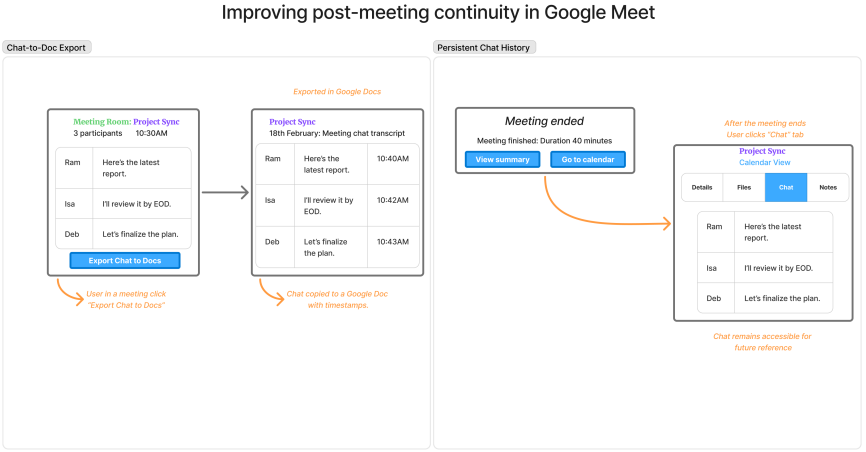

| Solution | Reach (1-3) | Impact (1-3) | Confidence (1-3) | Effort (1-3) | RICE score | Rationale |
|---|---|---|---|---|---|---|
| | | | | | | heavy and AI-dependent. Medium reach, higher build effort. |
| Context Continuation Mode | 2 | 2 | 1 | 3 | 1.33 | Innovative but assumption-heavy and high effort. Recurring-meeting specific use case. |

## Product flow (Details of the feature/product):

1. **Customer Journey**

   *Join Meeting → Chat Normally → Meeting Ends → Chat Saved → Access via Calendar → Retrieve Context → Repeat Usage*

2. **Wireframes and Flow diagrams**

3. **User Stories**
   a. Story 1 – **Meeting Participant:** As a working professional, I want to access chat messages after a meeting ends. So that I can revisit shared links, decisions, and action items without relying on memory or external tools.
   b. Story 2 - **Meeting Host:** As a meeting host, I want to control whether chat is saved. So that I can manage privacy and compliance requirements.
   c. Story 3 - **Frequent Collaborator:** As a team member in recurring meetings, I want to quickly search past chat discussions. So that I can avoid repeating conversations.
   d. Story 4 - **Enterprise Admin:** As an organization admin, I want to configure chat retention policies. So that the feature aligns with company compliance standards.
4. **User acceptance criteria**
   a. Chat messages are automatically saved after meeting ends.

b. Saved chat is accessible from
    i. Post-meeting summary screen
    ii. Google Calendar event page
c. Messages are:
    i. Timestamped
    ii. Attributed to participants
d. Users can:
    i. Search chat by keyword
    ii. Copy text
    iii. Export to Google Docs
e. Admin policies override user settings where applicable.
f. Join time and meeting performance remain unaffected.
g. Clear consent message is shown before chat persistence is enabled.

5. **Edge cases**

| Scenario | Expected Behaviour |
|---|---|
| Host disables chat persistence | Chat is not saved; no post-meeting access available |
| User joins late | Only messages after join time are visible to them |
| External guest joins meeting | Guest messages are saved but access is restricted based on host settings |
| Meeting has 1,000+ chat messages | Chat remains searchable and loads within acceptable latency |
| User deletes a Calendar event | Chat retention follows org retention policy, not event deletion |
| Organisation disables feature globally | Chat persistence unavailable for all users in org |
| Network disconnect during meeting | Messages sent before disconnect remain saved |

## Tentative Timelines:

| Task | Date |
|---|---|
| Leadership approval | 01/03/2026 |
| Design ready | 14/03/2026 |
| Prototype testing | 08/04/2026 |
| Development starts | 26/04/2026 |
| Beta Launch | 19/10/2026 |

## Dependencies:

1. Open Questions
2. Should chat persistence be **default ON** or host-enabled during rollout?
3. What should be the **default retention duration** (30 / 60 / 90 days)?
4. Should external guests have equal access to saved chat?
5. Should chat be editable or permanently immutable once saved?
6. How do enterprise retention policies override default behaviour?
7. Should mobile and desktop launch simultaneously or be phased?

8. Infrastructure requirements
    a. Secure backend storage for persistent chat logs.
    b. Integration with **Google Drive storage infrastructure**.
    c. Scalable architecture to handle high meeting volume (100M+ meetings/month).
    d. Search indexing system for chat retrieval.
    e. Encryption at rest and in transit.
    f. Retention management system for automated deletion.
    g. Monitoring for storage cost per active user.
    h. Logging system for audit compliance.
9. Budget approvals
    a. Engineering effort allocation (Backend + Frontend + Mobile).
    b. Infrastructure storage cost projections.
    c. Privacy and legal review resources.
    d. QA and security audit investment.
    e. Potential incremental cloud storage cost per Workspace tier.
10. Partner Support (APIs, Partnerships)
    a. Google Calendar integration for post-meeting access.
    b. Google Docs API for one-click export.
    c. Google Drive API for storage and retrieval.
    d. Admin Console APIs for enterprise retention policies.
    e. Potential AI integration (future phase) for summaries.
11. Internal Dependencies (Tech, Design, Other Teams)
    a. Backend Team (chat logging & storage)
    b. Frontend Team (UI integration)
    c. Mobile Team (Android + iOS consistency)
    d. Search Infrastructure Team
    e. Privacy & Security Engineering
    f. UX Team to ensure minimal UI disruption.
    g. Design Systems Team to maintain Workspace consistency.
